

## **DHRM – WEB App Solved problems:**

1. Plant Code should be dependent LOV based on Company.
  - This feature has been added to our trainee application form and the incorporated problem has been solved.
2. Same Mobile number should not be allowed (duplicate check is must)
  - This factor is already available in our web app.
3. Title should be select value ( Mr / Miss / Mrs)
  - This issue is now solved and the title of the applicant is given as a select list.
4. Multiple values repeated like (Choose & Select ) for LOV
  - The above problem has been solved and the select gender option is now a null value so that it wont be saved in database.
5. Account no should be varchar
  - The account number field has been changed form number to text
6. IFSC code should be varchar
  - The IFSC code field has been changed form number to text
7. “Data Saved Successfully Message” missing while save each stage
  - A new feature has been added to our form with every sub form is saved now, a “details are saved” text become visible to user.
8. Education Details, Mandatory fields not validated while save
  - This issue has been fixed and now all fields are validated.
9. Previous Employment should be optional (Not mandatory)
  - Now, the Previous Employment details has been reprogrammed to be not mandatory.
10. Application is submitted without verified all the mandatory records.
  - Now, each and every sub form in the application is validated and submission is not allowed till all fields are valid.
11. Validate all the mandatory doc sent for approval
  - As it is mentioned in previous point, each and every field including the file uploading part has been validated.
12. HR Manager – Rejection is not working.
  - Rejection property is working properly now.
13. Printout company name alignment to be corrected
  - The ID Card component is now aligned correctly and also the address of plant has also been positioned as centre.
14. Every changes pointed out has been changed except for the first page alignment which is still under work.
